

The embodiments of the invention for which as exclusive privilege and property right is claimed are defined as follows:

1. A fence post for quick fence wire connection adapted for receiving a portion of a first strand of fence wire and holding the fence wire thereon, the fence wire connection comprising:

a vertical fence post with a first pair of horizontal studs in one side of said post:  
first vertical pinholes in said first pair of horizontal studs;  
a first wire gap disposed between said first pair of horizontal studs, said first wire gap adapted for receiving a portion of the first strand of fence wire therein; and  
a first locking pin received in said first vertical pinholes and above said first wire gap, said first locking pin adapted for holding the portion of the first strand of fence wire in said wire gap.

2. The fence wire connection as described in claim 1 wherein said first locking pin is an inverted "L" shaped first locking pin.

3. The fence wire connection as described in claim 1 wherein said first vertical pinholes are parallel and indexed with each other in said first pair of horizontal studs.

4. The fence wire connection as described in claim 1 wherein said first pair of horizontal studs have a side profile of a rectangular geometric shape, said first pair of horizontal studs including a vertical base integrally attached to the side of said post and parallel to a vertical top, said first pair of studs having an upper side parallel to a lower side.

5. The fence wire connection as described in claim 1 further including a second pair of horizontal studs in one side of said post and disposed below said first pair of horizontal studs, said second pair of horizontal studs having second vertical pinholes therein for receiving a second locking pin therethrough and a second wire gap between said second pair of horizontal studs, said second wire gap adapted for receiving a portion of a second strand of fence wire therein.

6. The fence wire connection as described in claim 5 wherein said first wire gap and said second wire gap have an equal space between said first pair of horizontal studs and between said second pair of horizontal studs.

7. The fence wire connection as described in claim 6 further including a third wire gap disposed between said first pair of horizontal studs and said second pair of horizontal studs, said third wire gap having a space equal to said first and second wire gaps, said third wire gap adapted for receiving a portion of a third strand of fence wire therein.

8. The fence wire connection as described in claim 5 wherein said second pair of horizontal studs have a side profile of a rectangular geometric shape, said second pair of horizontal studs including a vertical base integrally attached to the side of said post and parallel to a vertical top, said second pair of horizontal studs also including an upper side parallel to a lower side.

9. A fence post with quick fence wire connection adapted for receiving a portion of first and second strands of fence wire and holding the fence wire thereon, the fence wire connection comprising:

- a fence post with a first pair of horizontal studs in one side of said post;
- first vertical pinholes in said first pair of horizontal studs;
- a first wire gap disposed between said first pair of horizontal studs, said first wire gap adapted for receiving a portion of the first strand of fence wire therein;
- a first locking pin received in said first vertical pinholes and above said first wire gap, said first locking pin adapted for holding the portion of the first strand of fence wire in said first wire gap;
- a second pair of horizontal studs in the one side of said post and disposed below said first pair of horizontal studs;
- second vertical pinholes in said second pair of horizontal studs;
- a second wire gap between said second pair of horizontal studs, said second wire gap adapted for receiving a portion of a second strand of fence wire therein; and
- a second locking pin received in said second vertical pinholes and above said second wire gap, said second locking pin adapted for holding a portion of the second strand of wire fence therein.

10. The fence wire connection as described in claim 9 wherein said first and second locking pins are inverted "L" shaped first and second locking pins.

11. The fence wire connection as described in claim 9 wherein said first and second vertical pinholes are parallel and indexed with each other in said first and second pair of horizontal studs.

12. The fence wire connection as described in claim 9 wherein said first wire gap and said second wire gap have an equal space between said first pair of horizontal studs and between second pair of horizontal studs.

13. The fence wire connection as described in claim 9 further including a third wire gap disposed between said first pair of horizontal studs and said second pair of horizontal studs, said third wire gap adapted for receiving a portion of a third strand of fence wire therein.

14. The fence wire connection as described in claim 9 wherein said first and second pairs of horizontal studs include a vertical base integrally attached to the side of said post and parallel to a vertical top.

15. A fence post with quick fence wire connection adapted for receiving a portion of a first strand of fence wire and holding the fence wire thereon, the fence wire connection comprising:

a fence post with a first pair of horizontal studs integrally formed in one side of said post, said first pair of horizontal studs including a vertical base integrally attached to the one side of said post and parallel to a vertical top, said studs also including an upper side parallel to a lower side;

first vertical pinholes in said first pair of horizontal studs, said pinholes parallel and indexed with each other;

a first wire gap disposed between said first pair of horizontal studs and adjacent the vertical base of said first pair of studs, said first wire gap adapted for receiving a portion of the first strand of fence wire therein; and

an inverted “L” shaped first locking pin received in said first vertical pinholes and above said first wire gap, said first locking pin adapted for holding the portion of the first strand of fence wire in said wire gap.

16. The fence wire connection as described in claim 15 further including a second pair of horizontal studs integrally formed in one side of said post and disposed below said first pair of horizontal studs, said second pair of horizontal studs having second vertical pinholes therein for receiving a second inverted “L” shaped locking pin therethrough, said second pair of studs including a vertical base integrally attached to the one side of said post and parallel to a vertical top, said second pair of studs also including an upper side parallel to a lower side and a second wire gap disposed between said second pair of horizontal studs and adjacent the vertical base of said studs, said second wire gap adapted for receiving a portion of a second strand of fence wire therein.

17. The fence wire connection as described in claim 16 wherein said first wire gap and said second wire gap have an equal space between said first pair of horizontal studs and between second pair of horizontal studs.

18. The fence wire connection as described in claim 17 further including an third wire gap disposed between said first pair of horizontal studs and said second pair of horizontal studs, said third wire gap having an equal space with said first and second wire gaps, said additional wire gap adapted for receiving a portion of a third strand of fence wire therein.

19. The fence wire connection as described in claim 16 wherein said second vertical pinholes are parallel and indexed with each other in said second pair of horizontal studs.

20. The fence wire connection as described in claim 16 further including a third pair of horizontal studs integrally formed in one side of said post and disposed below said second pair of horizontal studs, said third pair of horizontal studs having third vertical pinholes therein for receiving a third inverted "L" shaped locking pin therethrough, said third pair of horizontal studs including a vertical base integrally attached to the one side of said post and parallel to a vertical top, said third pair of studs also including an upper side parallel to a lower side.
